

Literature search report – Example project

scitech-librarian 3.2.1

August 28, 2026

Generated by scitech-librarian 3.2.1 (report level: simple). Every number below is reproducible from the archived research directory `lit`.

Item	Value
Search dates	2026-08-28 to 2026-08-28
Project	Example project
Description	the four example blocks of queries.example.json, searched twice, plus a reference list from a colleague; CC0 sources only
Sources	2 automated run(s), 1 manual source(s)
Blocks	NOV, MLP, PSC, QC
Backends / sources	openalex, arxiv, inspire, manual:reference-list
Mode	full fetch, up to 300 records per block and backend
Non-curated venue filter	on
Open-access lookup	not run
Journal metrics	on file for 103 journals
Filters	sources=all

Sources

Every search that feeds this report, oldest first. 'New here' counts unique records that no earlier source had found – what each search added.

Source	Kind	Date	Method	Records	New here	Label / origin
20260828T091142	run	2026-08-28 09:11	database	5	5	first pass (OpenAlex only, NOV + MLP)
20260828T160426	run	2026-08-28 16:04	database	1286	1221	full run, CC0 databases (OpenAlex, arXiv, INSPIRE)
reference-list	manual	2026-08-28 16:07	citation	8	2	reference list of a review article

Search strategy

Each block is one structural query – a conjunction of synonym groups, (a OR b) AND (c OR d) – rendered into every backend's native grammar. The strings below are exactly what was sent (PRISMA-S item 8), from the most recent run of each block.

Block NOV: EXAMPLE NOVELTY CHECK: origami metamaterials as topological acoustic pumps

Purpose: novelty-check pattern – a SMALL number is the good outcome; read every hit by hand before claiming a gap

(origami OR kirigami) AND (acoustic metamaterial OR phononic crystal) AND (topological pumping OR Thouless pump OR edge state)

Backend	Query string sent
openalex	(origami OR kirigami) AND ("acoustic metamaterial" OR "phononic crystal") AND ("topological pumping" OR "Thouless pump" OR "edge state")
arxiv	(all:"origami" OR all:"kirigami") AND (all:"acoustic metamaterial" OR all:"phononic crystal")
inspire	("origami" or "kirigami") and ("acoustic metamaterial" or "phononic crystal") and ("topological pumping" or "Thouless pump" or "edge state")

Block MLP: Machine-learned interatomic potentials for amorphous materials

Purpose: a narrower intersection – expect hundreds; good for testing record fetch and RIS export

(machine learning potential OR machine-learned interatomic potential OR neural network potential) AND (amorphous OR glass OR disordered solid) AND (molecular dynamics OR structure prediction)

arXiv receives groups [0, 1] only (nested-boolean limitation).

Backend	Query string sent
openalex	("machine learning potential" OR "machine-learned interatomic potential" OR "neural network potential") AND (amorphous OR glass OR "disordered solid") AND ("molecular dynamics" OR "structure prediction")
arxiv	(all:"machine learning potential" OR all:"machine-learned interatomic potential" OR all:"neural network potential") AND (all:"amorphous" OR all:"glass" OR all:"disordered solid")
inspire	("machine learning potential" or "machine-learned interatomic potential" or "neural network potential") and ("amorphous" or "glass" or "disordered solid") and ("molecular dynamics" or "structure prediction")

Block PSC: Perovskite solar cell degradation under humidity

Purpose: grounding block – expect thousands of hits; use it to sanity-check that every backend is reachable and the counts are plausible

(perovskite solar cell OR halide perovskite photovoltaic) AND (degradation OR stability OR encapsulation) AND (humidity OR moisture OR water ingress)

Backend	Query string sent
openalex	("perovskite solar cell" OR "halide perovskite photovoltaic") AND (degradation OR stability OR encapsulation) AND (humidity OR moisture OR "water ingress")
arxiv	(all:"perovskite solar cell" OR all:"halide perovskite photovoltaic") AND (all:"degradation" OR all:"stability" OR all:"encapsulation")
inspire	("perovskite solar cell" or "halide perovskite photovoltaic") and ("degradation" or "stability" or "encapsulation") and ("humidity" or "moisture" or "water ingress")

Block QC: Quasicrystal photonics (arXiv-tuned example)

Purpose: demonstrates arxiv_groups: arXiv chokes on deeply nested booleans, so name the two groups it should get

(quasicrystal OR quasiperiodic lattice) AND (photonic OR waveguide OR optical lattice) AND (localization OR critical states OR fractal spectrum)

arXiv receives groups [0, 2] only (nested-boolean limitation).

Backend	Query string sent
openalex	(quasicrystal OR "quasiperiodic lattice") AND (photonic OR waveguide OR "optical lattice") AND (localization OR "critical states" OR "fractal spectrum")
arxiv	(all:"quasicrystal" OR all:"quasiperiodic lattice") AND (all:"localization" OR all:"critical states" OR all:"fractal spectrum")
inspire	("quasicrystal" or "quasiperiodic lattice") and ("photonic" or "waveguide" or "optical lattice") and ("localization" or "critical states" or "fractal spectrum")

Results summary

Block	openalex	arxiv	inspire	manual:reference-list	Identified	Retrieved	Unique
NOV	0	0	0	-	0	0	0
MLP	477	138	0	8	623	357	315
PSC	4569	175	0	-	4,744	475	474
QC	154	414	17	-	585	467	439
Total	5,200	727	17	8	5,952	1299	1228

Identified = database hit counts (not comparable across backends: proximity operators are dropped and stemming differs); summed over runs, and for manual sources the number of records ingested. Retrieved = records actually downloaded after the venue filter, capped by `--limit`. Unique = after DOI/title deduplication across all sources.

Timeline

Per-block hit totals in each automated run (sum over backends), oldest first; drift shows how the indexes – or the queries – changed.

Block	20260828T091142	20260828T160426
NOV	0	0
MLP	239	376
PSC	-	4,744
QC	-	585

When records entered the project

Month	Records first seen
2026-08	1228

PRISMA 2020 flow

Stage	n
Records identified from databases	5,944
openalex	5,200
arxiv	727
inspire	17
Records identified via other methods	8
citation	8
Records retrieved (downloaded / ingested)	1,336
Removed before screening: automation (non-curated venues)	37
Removed before screening: duplicates	71
Records to screen (unique)	1,228
Records screened	1,228 (assumed = unique)
Records excluded at screening	-
Reports sought for retrieval	-
Reports not retrieved	-
Reports assessed for eligibility	-

Stage	n
Other methods: reports sought	—
Other methods: reports not retrieved	—
Other methods: reports assessed	—
Studies included	—
Reports of included studies	—

Automation stages are computed from the data; '—' marks manual stages not yet recorded in screening.json. Note that 'identified' counts hits reported by each database while 'retrieved' is what was downloaded within --limit, so the two differ on large blocks.

PRISMA-S search-reporting checklist

Item	Requirement	This search
1	Database name	openalex, arxiv, inspire (documented public APIs)
2	Multi-database searching	3 databases, one structural query per block rendered into each native grammar; see Search strategy
3	Study registries	not applicable
4	Online resources and browsing	none recorded
5	Citation searching	reference-list
6	Contacts	none recorded
7	Other methods	none
8	Full search strategies	reported verbatim per backend under Search strategy; archived in queries.json of each run
9	Limits and restrictions	record download capped at 300 per block and backend, most-cited first; no date, language or document-type limits applied; report filters: sources=all
10	Search filters	venue filter on: records from non-curated repositories (Zenodo, Figshare, SSRN...) removed
11	Prior work	none
12	Updates	2 run(s) combined; see Timeline
13	Dates of searches	searched on 2026-08-28 to 2026-08-28
14	Peer review	none
15	Total records	5,944 identified from databases, 8 via other methods; 1,336 retrieved; 1,228 unique
16	Deduplication	exact DOI match, else first 90 characters of the lower-cased title; 71 duplicates removed

Top 10 records per block

Deduplicated across sources, sorted by cited. The complete set is in all_records.csv / .ris of each run.

Suggestions

- Block NOV: zero hits on every backend. Either the intersection is genuinely empty (a finding – check the synonyms first) or one group is too narrow; try dropping one group and rerunning.
- Block PSC: openalex 4,569 hits – a generic term is probably driving this; tighten a group or add a more specific one before reading.
- Block PSC: counts differ >20x across backends (175 to 4,569); grammar and coverage diverge, so do not compare these numbers – discover here, quote one source.
- Block QC: counts differ >20x across backends (17 to 414); grammar and coverage diverge, so do not compare these numbers – discover here, quote one source.
- No citation-grade backend (Scopus, Web of Science, NASA ADS) was in this search; add ADS (free token) or Scopus before quoting counts.
- Open-access status was not looked up; rerun with `--pdfs` (optionally `--pdf-blocks`) to collect legal OA PDF links via Unpaywall.
- The PRISMA flow’s manual stages are empty: fill in screening.json (screened / excluded / assessed / included) and rerun report.py to complete the diagram.
